Output

Q1.

Q2.

```
E Console Shell
main.py ×
1 import numpy as np
                                                                        First array:
  2 x = np.random.randint(0,2,6)
                                                                        [0 0 0 1 1 0]
 3 print("First array:")
                                                                        Second array:
  4 print(x)
                                                                        [100010]
  5 y = np.random.randint(0,2,6)
                                                                        Test above two arrays are equal or not!
  6 print("Second array:")
                                                                        False
  8 print("Test above two arrays are equal or not!")
 9 array_equal = np.allclose(x, y)
 10 print(array_equal)
```

Q3.

```
main.py ×

1 import numpy as np
2 print(0 * np.nan)
3 print(np.nan != np.nan)
4 print(np.inf > np.nan)
5 print(np.nan - np.nan)
6 print(0.3 == 3 * 0.1)
7
8
```

```
main.py ×

1 import pandas as pd
2 ser = pd.Series(['amrita', 'school', 'of', 'engineering', 'chennai', 'campus'])
3 NewSeries = ser.str.title()
4 print(NewSeries)
5
